

WAYNE KIRK SCHMIDT

PROFILE

Principal Enterprise AI Architect, Platform Engineer, and Distributed Systems Architect with 30+ years helping organizations design, deliver, and evolve mission-critical platforms across financial services, technology, and critical infrastructure.

I help organizations transform complex business and technical challenges into secure, scalable, and operationally sustainable platforms spanning enterprise AI, cloud and hybrid-cloud, distributed systems, automation, observability, and Tier-0 production environments.

Designed and delivered **Production Perimeter**®, a patented adaptive machine learning security platform whose intellectual property was later acquired by Illumio; **NXT RAW**®, a ¼µs ultra-low-latency market data platform supporting APAC exchanges; **ARK**®, an intelligent dependency platform supporting more than 60,000 hosts; and **BEACON**®, an ML-driven threat detection platform that reduced compromise detection time by 97%.

Today, I help organizations operationalize enterprise AI by designing the architecture, governance, and engineering practices that transform experimentation into trusted business capability.

My approach follows the **CODE** methodology (**C**ollect, **O**rganize, **D**eliver, and **E**volve), combining architecture with practical execution to simplify complexity, deliver measurable business outcomes, and strengthen long-term organizational capability.

I measure success not only by the platforms delivered, but by the confidence and capability of the teams that own them.

EXECUTION	LEADERSHIP	ADVISORY
High-performance, distributed data platforms at scale. Hands-on engineering across Python, DevOps, observability, automation, and low-latency trading systems from 60,000+ host fleets to ultra-low-latency market data platforms.	Engineering and operations ownership across Tier-0 systems and \$107M+ portfolios. Teams up to 30 engineers across global and regional operations.	Supported 60+ clients across 6 industries and 4 regions, allowing SME, MSSP, and Enterprise to navigate architecture, engineering, operations, and transformation.

SELECT ENGINEERING ACHIEVEMENTS

REALIZED	GUIDED	DELIVERED
\$300M+ measured impact across products, services, and portfolios in AMER and APAC.	5 zero-to-one production-grade platforms across security, finance, and operations.	90+ initiatives in system stabilization, digital transformation, and operational excellence.

- Delivered **NXT RAW**®, a ¼µs ultra-low-latency market data platform generating **\$14M+** in revenue across multiple APAC markets.
- Built **ARK**®, an ML-driven dependency intelligence platform supporting more than **60,000 hosts**, reducing deployment risk by **97%** and accelerating releases **17×**.
- Engineered a high-volume Kafka event management platform processing **1.5 million** events per minute, reducing response time from **20 minutes** to **10 seconds**.
- Built **BEACON**®, an ML-driven threat detection platform reducing compromise identification time by 97% across enterprise endpoint fleets.
- Invented **Production Perimeter**®, an adaptive ML-driven security platform deployed globally, with patented intellectual property later acquired by Illumio.
- Designed AI-assisted operational workflows reducing incident management from **two person-weeks** to **fifteen minutes** while improving governance, consistency, and operational efficiency.

PROFESSIONAL EXPERIENCE

ChangeIS

Founder & Principal Technologist

Tokyo, Japan

2013 – Present

Technology advisory practice helping organizations design, deliver, and operationalize enterprise AI, platform engineering, observability, and distributed systems across financial services, insurance, and technology.

- Delivered enterprise-wide AI workflows for a LATAM bank across IT Operations and Human Resources using Microsoft Copilot, Power Automate, and Power BI, reducing Incident and Problem Management reporting from **two weeks** to **five minutes**.
- Developed AI governance frameworks and engineering guidelines for a U.S. financial services firm, strengthening AI security, resilience, and data protection across on-premises, end-user, and hybrid environments.
- Deployed ML-driven log analysis platform reducing issue triage effort by **85%** and reducing MTTR by **3×**.
- Created ML-driven asset platform for global insurance firm, raising accuracy to **99.9%**, reducing reporting lag by **99.93%**.
- Engineered a high-volume Kafka event management platform processing 1.5 million events per minute, reducing response time from **20 minutes** to **10 seconds**.

- Insight Innovation Fund

Head of Product (Fractional / NED)

Tokyo, Japan

2024 – Present
- Patented **MORPHOS/9STACK®**, a reasoning-based AI orchestration architecture for secure, private, adaptive enterprise AI deployment.
 - Directed product architecture and enterprise AI solutions, advising on go-to-market, partnerships, and M&A strategy.
- Sumo Logic Japan, K.K.

Senior Solution Engineer

Tokyo, Japan

2018 – 2022
- Built **10+** vendor integrations across security, observability, and DevOps, expanding platform addressability for enterprise clients.
 - Developed automated monitoring tooling reducing deployment time by **82%**, adopted as the APAC reference tooling.
 - Authored **40+** client solutions across DevOps and observability, supporting renewals and expansion revenue in Japan.
- Tanium G.K.

Executive Director – Technical Account Management

Tokyo, Japan

2015 – 2016
- Created **BEACON®**, a ML-driven compromise threat detection system, reducing compromise identification time by **97%**.
 - Built **BRAVO®**, a ML-driven testing framework saving an estimated **\$1.8M** in engineering effort.
 - Architected compliance reporting for **1,000+** Fuji Xerox printers via Tanium, shortening audit/reporting cycles from weeks to days.
- Smart Technology Partners

Chief Technology Officer (Fractional)

Japan

2013 – 2016
- Designed a green energy cloud architecture using refurbished hardware, delivering sustainable infrastructure for 10+ clients.
 - Delivered Digital Transformation proposals for regional government clients across Fukushima and Kumamoto prefectures.
 - Developed cloud solutions across logistics, genetic data processing, and data center security.
- Nomura Securities

Executive Director – Asia Head of Market Data / Global Head of Market Data Engineering

Tokyo, Japan

2009 – 2013
- Delivered **NXT RAW**, a ¼µs ML-driven TSE data platform generating **\$14M+** in revenue.
 - Managed a **\$107M** portfolio over **7 APAC** markets, **30-person** team, and **15 global vendors** supporting trading and retail functions.
 - Built a DevOps automation framework reducing engineering effort by **70%** across a **\$25M** project portfolio.
- Morgan Stanley Securities Japan

Vice President – Infrastructure Architect, Asia-Pacific

Tokyo, Japan

2003 – 2009
- Built **ARK**, ML-driven dependency management across **60,000+** hosts, reducing deployment risk by **97%** and releases by **17×**.
 - Invented **Production Perimeter**, a patented self-learning ML firewall preventing hundreds of millions USD in potential trading losses.
 - Rebuilt Asia Equities QA and Integration Testing Environment, resolving systemic stability issues across the region.
 - Grew the infrastructure development team from 3 to **12 engineers** across APAC, in addition to a global deployment team.
- Morgan Stanley

Vice President – Perimeter Security Engineering

New York, New York

1998 – 2003
- Built **AEGIS**, cross-platform security and configuration management across 80+ institutional trading locations.
 - Built **ARGUS**, a firewall lifecycle automation suite coordinating global plant builds and reducing misconfiguration risk.
 - Led the firm's Y2K global security infrastructure refresh, replacing at-risk legacy systems across global operations.

EARLY CAREER: BOSTON & NEW YORK

Systems and infrastructure roles establishing technical foundations in networking, distributed systems, and enterprise platforms:

- GTE Internetworking Systems: automated provisioning across **500+** servers, improving restore performance by **20×**.
- Wildfire Communications: led 4-person sysadmin team, automating Windows NT provisioning from **7 hours** to **20 minutes**.
- Pencom / Collective Technologies: architected Tivoli-based software deployment platform for a **5,000**-laptop fleet.
- Salomon Brothers: fixed income trading support, delivered **15×** reduction in risk calculation time, **\$1.3M** procurement savings.

SELECTED TECHNICAL SKILLS

DevOps / Automation	Python, Bash, PowerShell, Ansible, Terraform, Puppet, Chef, Kubernetes, Docker, VMware, Jenkins, GitHub Actions, GitLab CI, AWS, GCP, Azure, OpenStack, Kafka, RabbitMQ, Tibco, Splunk, Sumo Logic, Elastic Stack, Grafana, Prometheus, Nagios, PostgreSQL, Redis, REST
ML / AI Systems	scikit-learn, XGBoost, LightGBM, TensorFlow, PyTorch, LangChain, spacy, NumPy, Pandas, Reasoning architecture design, Adaptive workflow systems, Low-latency ML inference, Edge & federated deployment, MORPHOS/9STACK® (patented), Matplotlib, Plotly, Dash
Security / Resilience	Tanium, CrowdStrike, Auth0, Recorded Future, Zeek, eBPF, Zero-trust architecture, NIST 800, ISO 27000, COBIT, SOX, ISO 31000, Checkpoint, Cisco, Arista, Palo Alto, ML-driven threat detection, Compliance & audit automation, Wireshark, Rkhunter
