Wayne Kirk Schmidt

Wayne Kirk Schmidt is an architect and engineering leader combining technology strategy with hands-on delivery across AI, cybersecurity, and enterprise platforms.

His career spans Morgan Stanley, Nomura, Tanium, Sumo Logic, and ChangeIS, leading engineering and operations teams across the Americas and Asia-Pacific.

As Founder & Principal Architect at ChangeIS, Wayne takes initiatives from concept and prototype through production delivery and client ownership.

He guides development, mentors teams, and builds reusable capabilities that improve security, reliability, and operational performance.

Operational and Security Highlights

- Built, packaged, and deployed AI workflows for a LATAM bank, reducing incident reporting from **two weeks** to **five minutes** and clearing a multiyear reporting backlog.
- Built and delivered an ML-driven asset platform for a global insurer, achieving **99.9% accuracy** and reducing reporting lag by **99.93%**.
- Delivered **$126M in cumulative multi-year cost savings** at Nomura via circuit, vendor, and hardware consolidation, improving latency, capacity, and stability.
- Developed **BRAVO**, an ML-driven testing framework at Tanium, saving an estimated **$1.8M in engineering effort**.
- Prototyped and delivered **PULSE**, then led the team that packaged, extended, and integrated it, processing **1.5 million** events/minute and reducing event-to -notification time from over **20 minutes** to **10 seconds**.
- Invented **Production Perimeter**, a patented security platform deployed across **60,000+ hosts**, preventing an estimated **$473M in trading losses**. Its intellectual property was subsequently acquired by Illumio.
- Invented **MORPHOS/9STACK**, a patented AI orchestration architecture for secure, private, adaptive enterprise AI.

Transformation and Architecture Highlights

- **Enterprise Operations Transformation: Global Insurance**
  Re-architected network operations, establishing asset management discipline, operational ownership, and configuration lifecycle tracking to stabilize distributed infrastructure.
- **Platform Architecture Strategy: Network Observability Company**
  Defined the architecture and phased roadmap for an on-premises product to become cloud-capable, aligning platform choices, engineering practices, and operational delivery.
- **Enterprise Transformation Advisory: Multinational Bank**
  Defined transformation direction, integrating digital assistants and reorganizing enterprise data processing to support retail and institutional business lines.

Wayne combines invention, engineering leadership, and advisory work to turn complex problems into practical capabilities that teams can operate and evolve.
