

Wayne Kirk Schmidt

Wayne Schmidt is a technology executive and systems architect with 25+ years of experience delivering large-scale transformation, platform architecture, and operational innovation across Fortune 500 enterprises and high-growth technology firms.

A trusted advisor and hands-on architect, Wayne leads global initiatives spanning security, data, automation, and ML/AI. His work provides actionable bridges across strategy and execution, consistently delivering scalable, resilient platforms that deliver measurable operational and financial improvements.

Operational and Security Highlights

- Standardized operational tooling and support models for a top-tier insurance firm, enabling true 24/7 operations and improving incident response by **83%**.
- Rebuilt APAC data operations for a Tier-1 investment bank—automating workflows and coordinating teams across six countries, delivering **\$3.2M** in savings and **75%** faster processing.
- Designed an adaptive testing platform for a leading endpoint security company, reducing test cycles from days to hours and saving **\$2.1M** annually.
- Designed and delivered an adaptive event monitoring platform for a managed service provider, reducing response times from **20 minutes** to sub **10 seconds** and delivering **\$3.2M** in client savings.
- Invented the patented **Production Perimeter** architecture, a machine learning driven edge-enforced security system that reduced “friendly fire” risk in distributed and hybrid environments, preventing hundreds of millions of dollars in potential loss exposure.
- Created the patented MORPHOS framework, a modular orchestration layer for distributed AI/ML supporting real-time analytics, automation, and resilient operation in degraded or low-connectivity environments.

Transformation and Architecture Highlights

- **Enterprise Operations Transformation:** Global Insurance
Re-architected network operations for a multinational insurer, introducing asset management discipline, operational ownership models, and configuration lifecycle tracking to stabilize and scale distributed infrastructure.
- **Platform Architecture Strategy:** Network Observability Company
Delivered the architectural vision and transformation roadmap to evolve a leading network observability platform from an on-premises product to a cloud-capable platform. The work included comparative analysis of commercial and open-source cloud ecosystems and a phased implementation roadmap spanning product architecture, engineering practices, and operational delivery.
- **Enterprise Transformation Advisory:** Multinational Bank
Defined transformation direction for a global banking organization, including integration of digital assistants and reorganization of enterprise data processing to support retail and institutional business lines.

Wayne builds secure, scalable outcomes that simplify complexity, reduce risk, and deliver measurable results, whether modernizing legacy systems or creating what comes next.
